

Weekly Report for Sept. 6-9, 2016

Another successful week of training and capacity-building. Each week there is such growth and encouragement. We have a great crew and everyone is working great together. The leadership has been outstanding and open to sharing knowledge.

There were 47 test pits completed and approximately 65 test pits flagged in. The crew continues to improve quality of test pits working independently and they have gained enough confidence that everyone is filling out their own test pit forms. Also, they have all had a chance to experience the different ways of lying in transects. The weather was exceptionally hot and muggy but we took more short breaks with lots of water to keep everyone going.

The presentation this Friday focused on the electronic equipment used in the field. They will all have a chance in the last remaining weeks to get a chance to use the equipment.
